

Perform Vulnerability Analysis using OpenVAS

ILABS
CEH PRACTICAL

@mmar

OpenVAS is a framework of several services and tools offering a comprehensive and powerful vulnerability scanning and vulnerability management solution. Its capabilities include unauthenticated testing, authenticated testing, various high level and low-level Internet and industrial protocols, performance tuning for large-scale scans, and a powerful internal programming language to implement any vulnerability test. The actual security scanner is accompanied with a regularly updated feed of Network Vulnerability Tests which are over 50,000 in total

Aim

In this task, we will perform a vulnerability analysis using OpenVAS.

DEMO

A grayscale photograph of a calm sea with a small structure on the right and mountains in the background. The word 'THANKS' is overlaid in the center.

THANKS
