Perform Vulnerability Research in Common Vulnerabilities and Exposures (CVE)

ILABS
CEH PRACTICAL

@mmar

Aim

Common Vulnerabilities and Exposures (CVE) is a publicly available and free-to-use list or dictionary of standardized identifiers for common software vulnerabilities and exposures. It is used to discuss or share information about a unique software or firmware vulnerability. It provides a baseline for tool evaluation, and enables data exchange for cybersecurity automation

Here, we will use CVE to view the latest underlying system and software vulnerabilities
