Perform an SQL Injection Attack on an MSSQL Database

ILABS
CEH PRACTICAL

Aim

Microsoft SQL Server (MSSQL) is a relational database management system developed by Microsoft. An SQL injection query exploits the normal execution of SQL statements. It involves submitting a request with malicious values that will execute normally but return data from the database that you want.

We will use an SQL injection query to perform SQL injection attacks on an MSSQL database. In this task, the machine hosting the website (Windows Server 2019) is the victim machine; and the Windows 11 machine will perform the attack
